

BGB-0200S

ADVANCED FILTRATION TECHNOLOGY

This Aquamor Foodservice brand filter contains a 0.5 micron compressed carbon block and polyphosphate scale inhibitor. The high quality carbon block provides tremendous capacity to reduce impurities, chlorine taste and odor as well as sediment that may be present in your drinking water. The carbon block has millions of active sites on its surface and within the structure which can absorb impurities like a sponge, and can attract and hold other types of impurities to its surface like a magnet. Additionally, this filter can catalytically breakdown other impurities very similar to the way a catalytic converter works in your automobile. The scale inhibitor reduces the accumulation of minerals that lead to hard water deposits from lime scale build up on equipment. These processes ensure that you are getting the cleanest and best tasting water possible. The BGB-0200S is as versatile as an inline filter but with the convenience of quarter turn removal and reattachment allowing for simple and quick maintenance. It can be used in a wide variety of applications such as office coffee, water coolers, chillers, coffee brewers and insta-hot just to name a few. The compact, quarter turn head assembly is perfect for installations where space is limited yet allowing for mounting to prevent movement which could cause damage to nearby components.

This Aquamor Foodservice filter is economical and will provide you with months of protection in any beverage or food equipment application.

BGB-0200S

Filter and head may be purchased as a system assembly or separately.

Filter and Head Assembly P/N: 106046

Filter P/N: 10686

Head P/N: 307013

FILTER FEATURES

- Up to four times the scale reduction capacity compared to most other brands
- Dual O-ring design provides a water tight seal
- Economical alternative to expensive filter substitutes
- Quarter turn head allows for quick and easy maintenance
- By-pass head assembly design eliminates the need for an inlet shut off valve
- Patented Scale control to ensure proper beverage equipment performance
- Delivers clean, clear water that looks and tastes great
- Reduces sand, silt, sediment, rust, chlorine taste and odor from your drinking water
- Designed to provide up to 4,000 gallons of life
- Does not remove minerals which may be beneficial to health

SPECIFICATIONS

Micron Rating:	0.5 Micron
Dimensions:	2.25" x 12.25" (5.71 x 31.11 cm)
Operating Pressure:	25-125 psi (1.7-8.6 bar)
Operating Temperature:	35°-100° F (1.7° - 38° C)
Flow Rate:	0.5 gpm (1.89 lpm)
Life:	4,000 gallons (15,141 liters)

Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.
